

BIO-BLOOM™

Hoof and coat conditioner for horses

A dual-action supplement designed to promote and maintain healthy skin and hoof condition from the inside out.

BIO-BLOOM contains biotin, methionine and chelated zinc at levels shown to be beneficial for hoof growth, development of strong hoof wall, and a soft, shiny coat. These nutrients work synergistically to improve hoof and coat quality. Weak, split, or cracked hooves and collapsed heels are all factors that may cause lameness and loss of performance.

BIO-BLOOM may assist in keeping horses in work by supporting recovery from hoof problems and by possibly preventing them from occurring. Lecithin and full-fat soybean meal contain essential fatty acids and amino acids to help produce a shiny coat and quality hoof horn. At higher dose rates BIO-BLOOM may assist in recovery from laminitis by helping to grow new healthy hoof horn and replace ridged and damaged horn more quickly.

USES:

- To assist in producing a soft, shiny coat
- To assist in the strengthening of weak or soft hooves
- To aid in recovery from hoof horn damage such as that caused by laminitis
- To promote mane and tail growth
- To increase the quality of hoof growth where there may be damage due to seedy toe, sand cracks, shelly hooves or hooves that are dry and brittle

GUARANTEED ANALYSIS:		(per 30 g)
Methionine (min)	10%	3000 mg
Zinc (min)	6,666 ppm	200 mg
Iodine (min)	66 ppm	2 mg
Biotin (min)	500 ppm	15 mg

DIRECTIONS FOR USE:

Top-dress on feed. Feed 30 g to 120 g per day to horses and ponies.

30 g	Increased hoof growth and strength
60 g	Treatment of acute hoof damage and coat conditioning
90-120 g	Recovery from laminitis

These recommendations are for horses with a mature body weight of 1100 lb (500 kg). Please adjust according to the weight of your horse.

1 scoop = 1.05 oz (30 g)

AVAILABLE SIZES:

5 lb, 2.27 kg (75 servings)
