

# B-QUIET™

## Thiamine supplement for horses

### A supplement formulated to provide horses with thiamine, an essential B vitamin

A deficiency of thiamine has been shown to lead to nervous behavior in some horses. B-QUIET provides concentrated levels of thiamine to treat the symptoms of thiamine deficiency. In hardworking horses or those on high-grain diets, production of thiamine by intestinal bacteria may be reduced because of stress and hindgut acidosis.

Thiamine plays a vital role in carbohydrate metabolism and nerve transmission. When the levels of thiamine fall below essential levels then weight loss and anxious/nervous behavior may result.

#### USES:

- To nutritionally support excitable and highly-strung horses
- Horses that are poor travellers or those that are anxious away from home
- Horses that are prone to tying-up
- Mares that become irritable when in season
- Horses that are unmanageable on grain
- As an alternative to vitamin B<sub>1</sub> injections

**GUARANTEED ANALYSIS:** (per 30 g)  
Thiamine (B<sub>1</sub>) 33,333 mg 1000 mg

#### DIRECTIONS FOR USE:

For horse displaying signs of thiamine deficiency, the following amounts should be fed daily. Mix well with feed.

- 30 g per day - mix into the feed for as long as signs persist.
- 30 g per day - for horses on high grain intakes or those in heavy training
- Double doses (60 g per day) may be given for two days prior to a show, competition or racing

1 scoop = 1.05 oz (30 g)

#### AVAILABLE SIZES:

6 lb, 2.72 kg, (91 servings)

#### B-QUIET PASTE

B-QUIET Paste offers the same benefits as B-QUIET Powder but also includes magnesium. Thiamine and magnesium are essential nutrients for carbohydrate metabolism and nerve transmission. B-QUIET Paste is a nutrient-enriched supplement for all classes of horses for use before and during competition using an easy-to-administer oral syringe.

1 tube = 1.05 oz (30 g)
